

ESTABLISH™ CalfBEL™

Harbor the health of your calves with the new ESTABLISH CalfBEL line of products from Perdue AgriBusiness®

Probiotics seed a calf's intestinal tract with healthy microbiota to optimize their immune response and limit pathogenic challenges, making them less susceptible to disease and stronger to handle the pressures of new life.

CalfBEL Newborn-O™

Provides a specifically formulated blend of bacteria for calves from birth to 48 hours old. This product contains bacteria that have been selected to optimize the calf's microbiome, prime the immune system, and limit pathogen challenge in newborn calves.

CalfBEL Young-O™

The continued treatment for increased nutrient digestibility and improved intestinal function once a calf begins milk or milk replacer feedings.

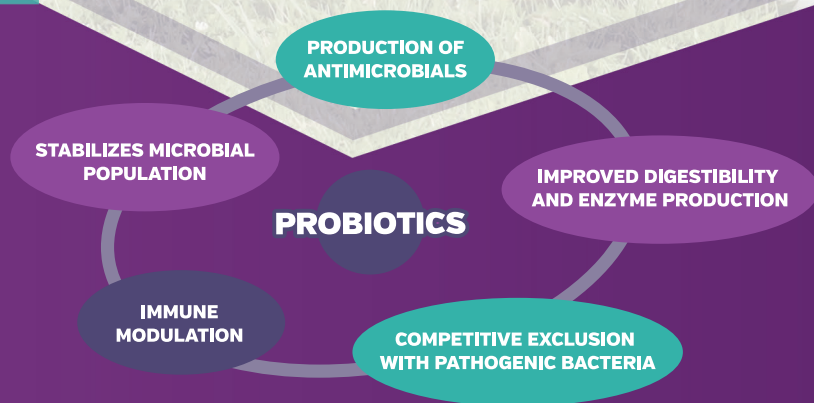

CalfBEL Defend-O™

Created to benefit the calf during weaning by stimulating immune function, improving intestinal function, increasing nutrient digestibility, stabilizing the microbiome and limiting pathogen colonization.

**Develop.
Strengthen.
ESTABLISH™**

Our CalfBEL products contain a unique selection of beneficial bacteria, selected for their specific roles with the intestinal tract. The grouping of bacteria into a single product has a complementary effect, so that the strengths of each species contribute to the overall effectiveness of the probiotic in early calf development.

Perdue AgriBusiness® is fully equipped to help harbor the health of your calves, for a stronger, healthier herd from the very beginning! Contact us today to learn more about our new ESTABLISH CalfBEL line of products.
